Drispac® Polymers are high-quality Polyanionic cellulose polymers. They are used for inhibition, water-loss control and viscosity in water-based muds. Drispac® Polymer comes in two viscosity grades: Drispac® Regular Polymer (high viscosity) and Drispac® Superlo® Polymer (medium viscosity).

**Advantages**

- Control fluid loss
- Promotes fragile gels
- Inhibits hydrateable, swelling shales
- Increases resistance of clay muds to contamination
- Non-fermenting, no preservative needed
- Good thermal stability to ≥300°F
- Produces thin, slick, tough filter cake
- Environmentally compatible
- Retards drilled solids build-up by inhibiting cutting disintegration
- Reduces friction and can reduce ECD
- Works well at any salinity

**Cost**

The purity and assured high quality of the products are strong contributors to lower overall mud costs and total well costs.

**Mud Types:**

Water-based drilling and drill-in fluids, work over fluids and completion fluids of any salinity. More efficient performance with calcium below 500 ppm. Slightly more polymer needed at higher calcium levels.

**Mixing Requirements**

Drispac® Regular Polymer and Drispac® Superlo® Polymer: Mix slowly through conventional jet hopper.

**Handling**

For specific instruction on handling refer to the MSDS.

**Packaging**

Drispac® Polymers: 50-pound, multiwall paper sacks
