Liquid HE®200 Polymer

Product Description

Liquid HE®200 Polymer is a synthetic polymer with multiple applications in the coil tubing market. The product can be applied for drag reduction or hole cleaning during operations such as plug drill outs. Benefits that are associated with using this product are rapid hydration, tolerance to robust water chemistry, and the elastic nature of the product which assists in carrying debris from the well.

Liquid HE®200 Polymer is currently offered as a liquid suspension. It is packaged in 275-gallon totes or 5-gallon pails. Product application can be completed by adding directly to the mix tank or metered positive displacement pump.

Application Guidelines

Liquid HE®200 Polymer dosage can vary based on water chemistry and environmental characteristics. The upper limit for temperature tolerance is approximately 270°F – 290°F based on time downhole and fluid characteristics. The recommended starting dosage for drag reduction is 0.25 gal/10 bbls and can be adjusted accordingly. When using the product for hole cleaning the dosage can vary based on fluid characteristics and job guidelines. As an estimate, it is recommended to begin make up using 2 gal/10 bbls and adjust as needed.

For further information please contact your local Drilling Specialties representative or the technical contact listed.

Packaging and Logistics:
Totes – 275 gallons
Pails – 5 gallons – 32 pails per pallet
