At Chevron Phillips Chemical, safety is more than a priority – it is ingrained in our company culture.

We are hiring innovative and motivated fire, health and safety professionals for a variety of challenging roles throughout our global operations.

Do you thrive on problem-solving, project management and teamwork in a diverse workplace? We are growing rapidly and offer exciting career opportunities, competitive benefits and ongoing learning and development programs.

Emergency response and security

Emergency response and security specialists assist with responses to fire, medical, hazardous material and rescue emergencies. In this role, you may also develop, review and revise emergency response procedures and training. Security duties may include acting as a liaison to outside agencies and overseeing facility security personnel.

Fire protection

Fire protection specialists take the lead on establishing design specifications and standards for new fire protection system installation. You may also work with facility personnel to assess and mitigate hazards and help implement lessons learned from safety-related incidents and near misses.
Health and safety

Health and safety specialists can be based in our corporate or manufacturing environments. This role requires working closely with employees and contractors to ensure they maintain safe work practices. You may implement, direct and audit for compliance with federal, state, local and company regulations, standards and guidelines. These professionals also provide support during the planning and implementation phases of projects and maintenance turnarounds.

Industrial hygienists

Industrial hygienists identify, evaluate and implement controls to reduce the risk of workplace chemical, biological and physical hazards. In this role, you may work at the corporate level or within a manufacturing facility.

Process safety

Process safety professionals assess process-related hazards, help safely facilitate changes to process equipment and work closely with engineers of all disciplines. You may also help with proper siting of buildings, equipment and tanks based on company and industry practices.
