Film, Extrusion Coating & Geomembrane Products

Performance by design. Caring by choice.[™]

Marlex[®] Polyethylene

Chevron Phillips Chemical produces a variety of polyethylene products. These products are designed to meet the needs of a wide range of flexible packaging applications, such as blown and cast films, extrusion coating, laminations and more.

Polyethylene	Attributes	Applications		
METALLOCENE	Superior Toughness, Improved Optics	High Clarity; Coextrusion		
HIGH DENSITY	Low Moisture and Gas Permeability, Higher Softening Temperature, Chemically Resistant	Liner Films - Cereal, Crackers; Grocery Bags; Extrusion Coating		
LOW DENSITY	Processibility, Clarity, Low Temperature Sealing, Good Shrink Properties	Bakery; Shrink Film; Coex Films (seal layer); Extrusion Coating		
LINEAR LOW DENSITY	Improved Toughness, Higher Tensile Strength	Trash Bags; Industrial Liners		
MEDIUM DENSITY	Processibility, Stiffness	Heavy Bags; Industrial Films		

Film & Extrusion Coating Products

Chevron Phillips Chemical offers a full range of innovative film & extrusion coating products designed to meet the most challenging customer needs. With multiple manufacturing platforms, you can count on our leading-edge technologies and application development expertise when selecting the right material for your application. If you're in need of polyethylene, we have the right product for you.

Cast Film

The cast film process differs dramatically from the blown film process primarily due to the fast quench cooling of the chill roll. This fast quench is responsible for the unidirectional orientation characteristics of cast film. These characteristics allow a cast film line to operate at higher production rates, while producing amazing optics. Applications in food and retail packaging take advantage of these strengths. The products below are our solutions to your cast film application needs.

In addition to a wide variety of traditional film resins, Chevron Phillips Chemical is pleased to offer Marlex[®] metallocene resins. These products combine the characteristically superior strength and sealability of metallocenes with unprecedented optics. Marlex[®] resins have the lowest haze and highest gloss across a variety of densities compared to other competitive products.

Blown Film

The blown film process is the most diverse conversion system used for polyethylene. ASTM defines films as less than 0.254 mm (10 mils) in thickness. Monolayer and multilayer coextrusion technologies lay the groundwork for finding the right products for the application. The blown film process allows some control of properties such as clarity, toughness, and strength via process conditions and resin type. Our highly experienced technical support team can help customers define the blown film processing conditions needed to optimize performance, while our world-class sales and marketing team can assist customers with resin selection and provide other valuable customer services. The products below are our solutions to your blown film application needs.

Extrusion Coating & Lamination

With more than 50 years experience in the extrusion coating and lamination industry, Chevron Phillips Chemical is one of the leading North American suppliers of extrusion coating polyolefin products. Marlex[®] polyethylene extrusion coating products are designed to meet the challenging processing demands of extrusion coating and are optimized to provide minimal neck-in with maximum draw properties and excellent adhesion to a wide variety of substrates. The products below are our solutions to your extrusion coating application needs.

Geomembrane

As the innovation leader in polyethylene geomembrane resins, Chevron Phillips Chemical offers a complete portfolio of LLDPE and MDPE grades designed to meet or exceed the demanding requirements of geomembrane applications in round and flat die processes.

Technical Support

Chevron Phillips Chemical provides support to customers using fabrication and lab equipment available in the Bartlesville Technology Center. These resources include fabrication facilities for extrusion coating & laminating, blown film and cast film. This equipment allows our customers to screen various packaging concepts and structures for application development before using valuable commercial production line time. Our equipment is capable of both single-layer and co-extrusion, slitting, and surface treatment. We offer additional laboratory support to our customer base with analytical and physical testing tailored to the packaging and geomembrane industry. Contact your sales or technical service representative for details and scheduling opportunities.
