## Marlex® HXM 50100 Polyethylene

Version 1.4

Revision Date 2019-12-05

Odor: Mild to no odor

Chevron Phillips Chemical Company LP and its legal affiliates makes no representation, promise, express warranty or implied warranty concerning the suitability of this material for use in implantation in the human body or in contact with internal body fluids or tissues.

### **SECTION 2: Hazards identification**

Classification of the substance or mixture GHS Classification and Labeling: Follow GB 13690, GB 15258 and GB 30000.2 to GB 30000.29 (GHS 2011)

### **Emergency Overview**

Form: Pellets Physical state: Solid Color: Opaque

### Classification

Not a hazardous substance or mixture.

### Labeling

Not a hazardous substance or mixture.

**SECTION 3: Composition/information on ingredients** 

| Chemical name                         | CAS-No. / EINECS-No. | Concentration<br>[wt%] |
|---------------------------------------|----------------------|------------------------|
| Polyethylene Hexene Copolymer         | 25213-02-9           | 99 - 100               |
| Contains no hazardous ingredients acc | ording to GHS.       |                        |
| SECTION 4: First aid measures         | ording to GHS.       |                        |

| 02011011 |  |

|          |  |
|          |  |
|          |  |

| If inhaled              | : | Move to fresh air in case of accidental inhalation of dust or fumes from overheating or combustion. If symptoms persist, call a physician.   |
|-------------------------|---|--|
| In case of skin contact | : | If the molten material gets on skin, quickly cool in water. Seek<br>immediate medical attention. Do not try to peel the solidified<br>material from the skin or use solvents or thinners to dissolve it. |
| In case of eye contact  | : | In the case of contact with eyes, rinse immediately with plenty of water and seek medical advice.  |
| If swallowed            | : | Do not induce vomiting without medical advice.   |

| SECTION 5: Firefighting meas | ures                |
|------------------------------|---------------------|
| Flash point                  | : No data available |
| Autoignition temperature     | : No data available |

| Revision Date 201 | 9-12-05 |
|-------------------|---------|
|-------------------|---------|

| sion 1.4  |    | Revision Date 2019-12   |
|---|----|---|
| Suitable extinguishing<br>media   | :  | Water. Water mist. Dry chemical. Carbon dioxide (CO2).<br>Foam. If possible, water should be applied as a spray from a<br>fogging nozzle since this is a surface burning material. The<br>application of high velocity water will spread the burning<br>surface layer. Avoid the use of straight streams that may<br>create a dust cloud and the risk of a dust explosion. Use<br>extinguishing measures that are appropriate to local<br>circumstances and the surrounding environment.        |
| Specific hazards during fire fighting   | :  | Risks of ignition followed by flame propagation or secondary explosions can be caused by the accumulation of dust, e.g. on floors and ledges.   |
| Special protective equipment for fire-fighters  | :  | Use personal protective equipment. Wear self-contained breathing apparatus for firefighting if necessary.   |
| Further information   | :  | This material will burn although it is not easily ignited.  |
| Fire and explosion protection   | :  | Treat as a solid that can burn. Avoid generating dust; fine dust dispersed in air in sufficient concentrations, and in the presence of an ignition source is a potential dust explosion hazard.   |
| Hazardous decomposition products  | :  | Normal combustion forms carbon dioxide, water vapor and may<br>produce carbon monoxide, other hydrocarbons and<br>hydrocarbon oxidation products (ketones, aldehydes, organic<br>acids) depending on temperature and air availability.<br>Incomplete combustion can also produce formaldehyde.  |

|   |      | SAFETY DATA SHEET   |
|---|------|---|
| Marlex® HXM 50100 Po                            | oly  | <b>ethylene</b>   |
| Version 1.4                                     |      | Revision Date 2019-12-05  |
|   |      | themselves be sufficient. At elevated temperatures (>350°F,<br>>177°C), polyethylene can release vapors and gases, which<br>are irritating to the mucous membranes of the eyes, mouth,<br>throat, and lungs. These substances may include<br>acetaldehyde, acetone, acetic acid, formic acid, formaldehyde<br>and acrolein. Based on animal data and limited<br>epidemiological evidence, formaldehyde has been listed as a<br>carcinogen. Following all recommendations within this SDS<br>should minimize exposure to thermal processing emissions. |
| Advice on protection against fire and explosion | :    | Treat as a solid that can burn. Avoid generating dust; fine dust dispersed in air in sufficient concentrations, and in the presence of an ignition source is a potential dust explosion hazard.   |
| Storage   |      |   |
| Requirements for storage areas and containers   | :    | Keep in a dry place. Keep in a well-ventilated place.   |
| Advice on common storage                        | :    | Do not store together with oxidizing and self-igniting products.  |
| SECTION 8: Exposure controls/                   | /per | sonal protection  |

### Engineering measures

Consider the potential hazards of this material (see Section 2), applicable exposure limits, job activities, and other substances in the work place when designing engineering controls and selecting personal protective equipment. If engineering controls or work practices are not adequate to prevent exposure to harmful levels of this material, the personal protective equipment listed below is recommended. The user should read and understand all instructions and limitations supplied with the equipment since protection is usually provided for a limited time or under certain circumstances.

### Personal protective equipment

| Respiratory protection   | : No respiratory protection is normally required. If heated<br>material generates vapor or fumes that are not adequately<br>controlled by ventilation, wear an appropriate respirator. Use<br>the following elements for air-purifying respirators: Organic<br>Vapor and Formaldehyde. Use a positive pressure, air-<br>supplying respirator if there is potential for uncontrolled<br>release, exposure levels are not known, or other circumstances<br>where air-purifying respirators may not provide adequate<br>protection. Dust safety masks are recommended when the<br>dust concentration is excessive. |
|--------------------------|---|
| Eye protection           | : Use of safety glasses with side shields for solid handling is good industrial practice. If this material is heated, wear chemical goggles or safety glasses with side shields or a face shield. If there is potential for dust, use chemical goggles.   |
| Skin and body protection | : At ambient temperatures use of clean and protective clothing is<br>good industrial practice. If the material is heated or molten,<br>wear thermally insulated, heat-resistant gloves that are able to<br>withstand the temperature of the molten product. If this   |

#### **Further information**

Significant changes since the last version are highlighted in the margin. This version replaces all previous versions.

The information in this SDS pertains only to the product as shipped.

The information provided in this Safety Data Sheet is correct to the best of our knowledge, information and belief at the date of its publication. The information given is designed only as a guidance for safe handling, use, processing, storage, transportation, disposal and release and is not to be considered a warranty or quality specification. The information relates only to the specific material designated and may not be valid for such material used in combination with any other materials or in any process, unless specified in the text.
