Performance by design.
Caring by choice.™

Dear Valued Customers and Stakeholders,

Chevron Phillips Chemical believes plastics play an important role in a more sustainable future. We are proud of our reputation for delivering high-performance and high-efficiency products. While we celebrate the numerous benefits that our products contribute to society, we also acknowledge the global issue of plastic waste in the environment. Mismanaged plastic can end up in oceans and natural environments where it can pose a risk to marine life. As an industry, we can contribute to solutions for marine debris through exceptional plastic resin management practices.

For over 25 years, CPChem has been a member of Operation Clean Sweep®, a global initiative targeting zero plastic resin loss to the environment. We are proud of the success of our plastics management programs and ongoing commitment to keep plastic resins out of the environment. CPChem's plastic handling operations follow OCS® membership guidelines, which require implementing plastic management training and procedures, enhanced reporting, third-party verification and cross-industry collaboration. Our OCS® membership demonstrates the company's progress and determination to keep plastic resins out of the environment, supporting **UN SDG #12 Responsible Consumption and Production**.

We believe CPChem's customers and service providers can also play an important role in plastics management. CPChem has taken steps to advance solutions that help reduce plastic waste and support the circular economy through strategic investments and collaborations that promote innovation, improve waste management systems, and expand plastics circularity. To assist and empower the organizations and groups with which we work, we offer a collection of resources that support efforts to eliminate plastic resin loss that include:

- Operation Clean Sweep® - OCS® manual, additional resources and commitment information
- Best Practices - Support and suggestions for plastic management
- Our Efforts to Eliminate Plastic Waste

It is paramount that we work together in our efforts to achieve zero pellet and flake loss and use these valuable plastic resources to meet the needs of society now, and in the future. Please take advantage of the resources provided in this letter and consider taking your own OCS® pledge. For questions and requests for additional information, please contact your CPChem representative.

Sincerely,

Richard Wagner
Director, Sustainability
